SKILLS

Programming Languages:

Java, Python, ML-Python, JavaScript, TypeScript, OPPs, Data Structure & Algorithms

Backend Frameworks: Spring Boot, Spring Framework, Spring Data /JPA/Hibernate, Spring Security, Spring Cloud, Grails, Django, FastApi

Frontend: Angular, ReactJS, NextJs, HTML, CSS, SCSS, Bootstrap5, Tailwind CSS, jQuery.

Architecture: Microservices, Monolith, Modular Monolith, Event-Driven Architecture, Domain Driven Design

Distributed Systems: Transactional Outbox, Saga Pattern, Service Discovery, Load Balancing, Fault Tolerance, Resilience

Databases: PostgreSQL, MySQL, PLSQL, MongoDB, Redis

Messaging: RabbitMQ, ActiveMQ

Cloud: Aws(EC2, S3), MinIO,

KOUSHIK CHANDRA SARKER

SUMMARY

- Having **5+ years of experience in backend and full-stack web development.**
- Strong expertise in **Java, Spring Boot, and microservices architecture** for enterprise applications.
- Experienced in **designing and developing complete modules from scratch**, including insurance services for large-scale microfinance platforms.
- Hands-on experience in **building RESTful APIs, system design, and integrating new services with legacy systems.**
- Proficient in **Angular, ReactJS, and Django** for full-stack development.
- Strong knowledge of **SQL, distributed systems, and Agile/Scrum development practices.**
- Experienced in **handling change requests independently, resolving production issues, and maintaining large legacy codebases.**
- Working experience with defect management tools like **JIRA.**
- Effective team collaborator with experience in **Git-based workflows, JIRA-based issue tracking, and full SDLC participation.**

EDUCATION

Southeast University, Dhaka Bangladesh

Bachelor in Computer Science and Engineering

CGPA: 3.70 (out of 4)

Jan 2018 – 2022

WORK EXPERIENCE

- Working for **BRAC IT Services Limited** as **Software Engineer** from **02 May 2024 to Present** on Microfinance platform using Java, Spring Boot, Microservices, Angular 17, and legacy AngularJS/Grails.
Responsible for designing and developing the microinsurance module from scratch, building backend services, REST APIs, and frontend UI. Worked on legacy codebase, handled Change Requests (CRs), resolved production issues, and participated in architecture discussions, sprint planning, and deployments.
- Worked for **Midas Software Solutions** as **Technical Consultant – Full Stack Java Developer** from **July 2022 to April 2024** on Java, Spring boot.
Solve a given problem. Develop a running project. Design project architecture as per requirement. Participate in project architecture design. Participate in business decision making. Plan production deployment. Participate in sprint planning as well delivery planning.
- **Inovace Technologies Ltd**, as **Software Engineer- Full Stack Developer** from **October 2021 to May 2022** on Java Spring boot and AngularJS (v1.8).
Responsible for full stack development, including API development with Spring Boot, and creating websites using AngularJS (v1.8). Actively involved in issue resolution and process enhancement. Collaborates with designers, managers, and developers across project teams.

DevOps tools: Docker, Kubernetes (Basic), Jenkins (Basic CI/CD), Red Hat Openshift

Reporting & Document Generation: JasperReports, iReport, iText, PDF Generation from Dynamic HTML

Version controlling: Git, GitHub, GitLab

PROJECTS

Project 3: SBICloud V2 MF

Client: BRAC

Domain: MICROFINANCE

Environment: Java, Spring boot, Microservice, Angular, Grails

Responsibility:

- **Designed and developed the complete Insurance module from scratch** for the SBICloud V3 Microfinance platform used by BRAC.
- Responsible for **end-to-end module design**, including system architecture, database schema, API design, and business workflow implementation.
- Implemented **microservices using Spring Boot** to support insurance enrollment, policy management, claim processing, and financial transactions.
- Developed **RESTful APIs** and integrated the insurance services with other core microfinance modules.
- **Developed the frontend for the microinsurance module using Angular 17**, building user interfaces for insurance enrollment, policy management, and operational workflows.
- Integrated Angular frontend with backend microservices through **secure REST API communication**
- Worked extensively with the **existing legacy codebase of the BRAC Microfinance core system**, ensuring seamless integration with newly developed modules.
- **Handled multiple Change Requests (CRs) independently** in the legacy system, including requirement analysis, development, testing, and deployment.
- Investigated and resolved **production issues and system bugs** in both legacy and newly developed services.
- Collaborated with business analysts, QA teams, and stakeholders to ensure accurate implementation of business requirements.
- Participated in **architecture discussions, sprint planning, and code reviews** in an Agile development environment.
- Assisted in **deployment and release management** for new features and CR deliveries.

Project 2: BDI-NGI PROJECT

Client: BANK DANAMON (INDONESIA)

Domain: BANKING

Environment: Java, Spring boot microservice

Responsibility:

- Conducting comprehensive analysis of legacy workspaces to identify modules suitable for migration to a microservices architecture.
- Designing and implementing microservices using Spring Boot framework to improve scalability, modularity, and overall system performance.
- Collaborating closely with project managers, stakeholders, and development teams to ensure alignment of microservices migration plans with project objectives.

- Participating in requirement gathering sessions and providing technical insights to guide the development of XML-based

modules for seamless integration into the microservices architecture.

- Ensuring effective documentation of the microservices architecture, including technical specifications, system diagrams, and deployment procedures.
- Assisting in the deployment process by configuring and deploying microservices onto OpenShift platform.
- Monitoring the overall performance and health of deployed microservices, promptly identifying and resolving any issues or errors to maintain system stability and availability.
- Supervising and providing guidance to junior team members, conducting code reviews, and promoting best practices to ensure high-quality deliverables and professional growth of the team.
- Conducting thorough testing and debugging to identify and resolve any issues or errors encountered during the migration and deployment process.
- Continuously staying updated with the latest advancements and best practices in microservices development and Spring Boot to enhance the overall quality and efficiency of the project.

Project 1: HUMAN RESOURCE MANAGEMENT PROJECT

Domain: HRM

Environment: Java, Spring boot microservice, AngularJS (v1.8)

Responsibility:

- Responsible for full stack development, utilizing a wide range of technologies and frameworks.
- Conducted thorough requirement analysis and developed APIs using Spring Boot for seamless integration within the system.
- Developed websites from front to backend, employing AngularJS (v1.8) and Vue.js frameworks.
- Analyzed and resolved issues, actively contributing to the continuous improvement of the established development process.
- Collaborated closely with designers, managers, and fellow developers across project teams to ensure effective communication and successful project delivery.
